RE: VAN020160 – Norview Marina
General Permit for Total Nitrogen and Total Phosphorus Discharges and Nutrient Trading in the
Chesapeake Bay Watershed in Virginia

Dear Mr. Asaff:

We have reviewed your Registration Statement and determined that the referenced facility is hereby covered under the General Permit for Total Nitrogen and Total Phosphorus Discharges and Nutrient Trading in the Chesapeake Watershed in Virginia. Your coverage under this general permit is effective as of the date of this letter. The enclosed copy of the general permit contains the applicable monitoring and reporting requirements and other conditions of coverage. Also enclosed is a registration list containing the applicable effluent limitations for your facility, a copy of 9 VAC 25-820-80 listing facilities subject to Part I.C.1 of the permit and a Discharge Monitoring Report (DMR).

Please note that your nutrient loads must be offset in accordance with Part II of the permit. Documentation that sufficient waste load allocations have been acquired to offset the discharge must be provided prior to the issuance of a Certificate to Construct. The general permit registration list will have to be modified to include any waste load allocations obtained. Should the offset plan include non-point source load reductions, then the individual VPDES permit may also have to be modified to include the operation of any applicable best management practices.

In accordance with the permit, annual nutrient load limits become effective and you are required to begin monitoring following the issuance of a Certificate to Operate for the facility. Please refer to Parts I.E. and I.F. of the general permit for monitoring and reporting requirements. Please send DMRs to the address printed on the form. You will note that the annual limits are contained on a separate DMR page. This page is only required to be submitted with the December DMR due by January 10th of each year. DEQ is currently developing the software necessary to switch over to electronic submittal of DMRs under the watershed general permit. This program should be available later in 2012.
